

Visionary Communications provides 24x7x365 “**LIVE NETWORK MONITORING**” including dynamic live network mapping, network performance monitoring, single platform network device management, alarming, alerting, troubleshooting and device backup to healthcare, local government, education, business, and enterprise environments. Dynamic-View enhances network security measures via its “live” view of all devices connected to the Network. Our platform allows IT Administration the “Dynamic-View” of their internal network as well as all connections from outside the local network (WAN, Internet, VPNs and Cloud), to assess, analyze and maximize network machine data for IT/OT healthcare and business operations. Below are the major Performance Features:

AUTOMATED NETWORK MAPPING/INVENTORY

Complete discovery mapping of physical and logical topologies with device profiles on the network at your fingertips.

NETWORK DOCUMENTATION

Instantly know how everything on a network is connected and configured.

IP ADDRESS MANAGEMENT

Automatic listing of all the IP addresses you’re currently using, and which devices are using them.

MAP SEARCH & FILTER

Quickly find and visually isolate any part of a managed network.

MAP EXPORT

Print any map view to PDF or SVG for easy sharing or storage.

IN-APP TERMINAL

Securely access any Telnet or SSH-enabled device on a network—from anywhere.

REMOTE BROWSER

Log into any device’s web interface directly from your CCT-Dynamic-View dashboard

PASSWORD MANAGEMENT

Never again forget device credentials or leave them vulnerable.

TWO-FACTOR AUTHENTICATION

Extra layer security access to your CCT Dynamic-View account.

ROLE-BASED USER ACCESS

Set granular permission levels for each of your team members.

ALERTS & NOTIFICATIONS

Event management with preconfigured alerting that works out of the box and is customizable.

SERVICE MONITORING

Inventory and monitor the services running on nearly any device.

CONTEXT-AWARE DATA

Relevant and actionable information tailored to each device type.

LIVE & HISTORIC DATA

View network performance and statistical views as it happens with 60-second polling, or dive into detailed logs.

NETWORK EVIDENCE

Instantly know where a device has been seen across a network.

DEBUG DATA

All the technical debugging data you need, pooled in one easy-to-access location.

CONFIGURATION MANAGEMENT and ANALYSIS

Know exactly how devices are configured and when they changed and improve performance and stability.

CONFIGURATION RESTORE

Instantly bring back any configuration from your version history and restore configs from current back-ups available.

Visionary allows new potential customers an initial **Dynamic-View “live network assessment and service trial”, at no charge.** This initial discovery, mapping and monitoring of your network devices and their respective connections provides the baseline for identifying, maintaining, and improving network performance and security.

Please contact **Chip White, Business Development Agent at (303) 916-1653 or cwhite@visionarybroadband.com**, to schedule your no charge assessment and trial today.
